The Piggie : an account of the psychoanalytic treatment of a little girl / Winnicott W. D. (Donald Woods) - Harmondsworth : Penguin, 2008 - 224p. - 9780140146677.

Between the age of two and five, a little girl nicknamed 'the Piggie' - seriously disturbed by the birth of a younger sister - visited Dr Winnicott on sixteen occasions. A verbatim account of her visits is accompanied by illuminating excerpts from letters written to the analyst by the child's parents and an invaluable commentary by Dr Winnicott. This allows the reader to experience in detail the growth of a relationship between child and therapist and the gradual unfolding of the child's inner world. This classic piece of writing gives the reader the rare opportunity of being admitted to the intimacy of the consulting room and of studying the child and therapist at work. Of special value to professionals working with children, it will also fascinate anyone interested in how psychoanalysis works in practice.

Problem children-Counseling of-Handbooks, manuals, etc  
Child psychotherapy-Handbooks, manuals, etc

The defiant child presents a challenge to the therapist's patience as well as to his skill. To help clinicians grow in both, this skillfully written volume by Dr. John B. Mordock draws on more than twenty-five years of experience with troubled children and their families. The author begins with the premise that children are children first and troubled children second, framing the work with a clear understanding of developmentally appropriate behaviors. Principles are illustrated with wonderful concrete examples, so that a beginning therapist can find the answers to such questions as what to do when the child continually subjects you to verbal abuse, or when the child won't leave the counseling room. Aggressive and defiant youngsters have made noncompliance a way of life. Conversations with such children, specifically aimed at counseling them, will be of significant help to social workers, teachers, and therapists. This is a guidebook for adults who seek to help children who are depressed, defiant, timid, or otherwise troubled. It is wise, readable, humorous, and filled with practical tips. Most importantly, it offers hope without false promises.

Raising Cain : protecting the emotional life of boys / Kindlon, Dan and Thompson, Michael - London : Michael Joseph, 1999 - 320p. - 9780718143718.

Emotions in adolescence  
Boys-Psychology  
Sons

In *Raising Cain*, Dan Kindlon, Ph.D., and Michael Thompson, Ph.D., two of the country's leading child psychologists, share what they have learned in more than thirty-five years of combined experience working with boys and their families. They reveal a nation of boys who

are hurting--sad, afraid, angry, and silent. Kindlon and Thompson set out to answer this basic, crucial question: What do boys need that they're not getting? They illuminate the forces that threaten our boys, teaching them to believe that "cool" equals macho strength and stoicism. Cutting through outdated theories of "mother blame," "boy biology," and "testosterone," the authors shed light on the destructive emotional training our boys receive--the emotional miseducation of boys. Kindlon and Thompson make a compelling case that emotional literacy is the most valuable gift we can offer our sons, urging parents to recognize the price boys pay when we hold them to an impossible standard of manhood. They identify the social and emotional challenges that boys encounter in school and show how parents can help boys cultivate emotional awareness and empathy--giving them the vital connections and support they need to navigate the social pressures of youth.

Helping behavior

Written by well known and highly respected researchers in the field, this text is the first of its kind: A single volume text designed to provide a broad overview of this important research area. His text is organized in a way that answers the most commonly asked questions about helping behavior, then in its final chapter asks the students to think critically about what they have learned. This final chapter poses a series of new questions that will demonstrate the dynamic and evolving nature of this field of study. These questions were suggested by gaps in research and suggestions by top researchers in the field who responded to requests for what they thought were the most important unanswered questions. Child care workers

Written for practitioners in the child care and protection field, this study examines ways in which children's development can be disrupted, linking concepts of vulnerability and resilience to helping children who have been abused or have suffered other trauma. Two of the three authors are affiliated with Dundee University (UK) and have expertise in research psychology and social work; the third lectures in social work at Trinity College, Dublin. They discuss how attachment theory can be helpful for child care professionals by relating language, cognitive, moral, and social development to the quality of a child's human relationships. Using case studies, they emphasize how every child is unique and should be treated as such in the care setting.

The first publication of *Drama of Being a Child* and of this 1997 edition are separated by fifteen years of experience - the author's experience with her own self-therapy and with other recent therapy methods, and finally her knowledge of the life histories of the several thousand readers who have written to her. The research into childhood she has undertaken in this period has led to further fine-tuning of her earlier findings, as is documented and illustrated here with an abundance of examples. The author examines the consequences of repression at personal and social levels, the causes of the physical and psychological harm done to children and how this can be prevented, and finally the new methods at our disposal for dealing with the consequences of infant traumas.

Adolescenti da brivido : problemi, devianze e incubi dei giovani d'oggi / Coslin, Pierre G. - Roma : Armando Editore, 2012 - 320p. - 9788860819536.

Ancora oggi è presente una viva inquietudine tra i genitori e gli insegnanti, uniti a far fronte a certi giovani i cui comportamenti provocano una sorta di malessere comune più o meno diffuso. I giovani spaventano quando non sono il riflesso delle proiezioni degli adulti, quando osano mettere in atto quelle pulsioni che gli adulti hanno rifiutato. Pierre G. Coslin guida i lettori alla scoperta della diversità dei comportamenti di questi adolescenti che sbandano e aiuta a comprenderli meglio, stimolando la riflessione sui modelli di riferimento che la società potrà proporre loro.

Up to one third of migrants arriving in the European Union since the summer of 2015 have been children. The current emphasis on speedier asylum processing and making returns more effective may trigger increased use of immigration detention, possibly also affecting children. The detention of children implicates various fundamental rights and will only be in line with EU law if limited to exceptional cases. This report aims to support practitioners in implementing relevant policies in line with applicable laws by outlining available safeguards against unlawful and arbitrary detention and highlighting promising practices.

They also examine changes in adoption law, where such issues as placement policies in relation to children from ethnic minorities, intercountry adoption and the trend towards greater openness have become prominent and controversial in recent years.

This text sets residential life and work in the context of wider social systems, focusing on the function homes serve in looking after young people and adults who would struggle to live elsewhere. Roger Clough highlights what residential workers need to know and do in order that, together with residents, they organise systems and lifestyle to provide the best service. Good residential practice develops from theory and understanding: of people, structures,

residential practice, research methods and findings, organisational and management theory, and, critically, ethics and values.

A major programme of developmental research in residential care practice and management - the *Caring in Homes Initiative* - is described and evaluated in this book. It raises a series of questions about residential care in the Nineties and highlights serious issues that will shape the provision of residential care in the future. The authors evaluated the Initiative over a period of three and a half years, visiting projects and interviewing residents, staff and managers in homes across all care groups. Their findings should be interesting reading for everybody who wishes to see residential care as a positive choice, for all those who use it and for the staff who run the services.

Social service

The second edition of this key text renews its challenge to the established social work culture of managerialism and effectiveness, arguing that existing social work provision can fail the people it aims to support and protect. This second edition of *Social Work Management and Practice: Systems Principles*, which was first published in 1989, has now been extensively revised, and reflects the development of both systems ideas and policy implementation since that time. The authors apply the latest systems principles to the practice and management of social work. Drawing on Gregory Bateson's work, they show how creative social work can bring about real and positive change in the ecology of people's lives. This edition contains one new chapter analysing the competencies approach in social work training and updates the family therapy developments, and contains substantial new material on management. This powerful and accessible book demonstrates how a systems-based approach can support people in using their own resources to make new and innovative responses to difficult situations.

It examines the changing social work scene of the 1990s, and breaks new ground in areas such as: anti-oppressive supervision; supervision of post-traumatic stress; group supervision. *The Social Work Supervisor* is a comprehensive text for the social work supervisor, and for all supervisors in social welfare and community care settings. It includes new material not found in other books on supervision. The authors emphasise the importance of the supervisory relationship, regular skilled supervision and a clear value base in the provision of good quality services. This book provides a clear theoretical framework, bringing theory and practice together through numerous practical examples of supervision in action. One major chapter examines a range of typical supervision situations, and provides suggestions for possible supervisor responses. *The Social Work Supervisor* will be invaluable reading for new and experienced supervisors; practice-teachers supervising students; trainers of supervisors; and social work managers.

This compendium of information is so accessible, experienced and beginning supervisors will find it to be a valuable tool in their daily work. Field instructors and clinical practitioners, advanced or beginner, will find *Clinical Social Work Supervision* is appropriate for their work also. Competency based education-Great Britain

Social work training has become competence-based and competence-led as a result of CCETSW's Paper 30 in 1989 (and its subsequent amendments). Many students and practice teachers, however, have experienced difficulty in identifying evidence of competence for inclusion in practice portfolios. The contributors to this practical volume demonstrate how competence is best illustrated through detailed presentation of practice. Making a major advance in social work training, this book illustrates social work competences by describing genuine cases, real people and real contexts, while all identifying features have been changed to preserve confidentiality. It will greatly assist in the implementation of new requirements for the Diploma in Social Work. Each chapter identifies the core competences most pertinent to the case in question and core themes and principles which emerge in demonstrating competence.**361.4**

Child welfare-Great Britain

This survey of recent research on child placement contains important messages for social workers and their managers. The findings have many implications for practice and are likely to influence both the future direction of professional training in child care and the way in which social services departments implement the Children Act 1989. The survey takes as its focus three main themes from the new Act: the promotion of the child's welfare, partnership and planning. Relevant findings from more than 50 studies, large and small, are brought together and set in context.

Social work with youth-United States  
Family services-United States

The American family structure is complicated, and only becoming more so as time goes on. Finkelstein attributes this complexity, with its accompanying value confusions and inconsistencies, to the voluntary and involuntary, uprooted, migrant, immigrant, multiethnic and multicultural origins of the country itself. As people of different cultures intermarry, the complexities surrounding communications and expectations increase dramatically with each ensuing generation. These changes, coupled with the pressures of a rapidly changing world, place the American family and, therefore, American children in jeopardy. This unique volume does not just examine the troubles that American families face, or demand that changes be made. Finkelstein approaches family problems from a direct practice perspective and speaks to the implementation of needed services. The author designs an array of family-focused programs, emphasizing wellness, strengths, and assets. She calls on communities as well as individual agencies to organize themselves to create services, from the ordinary, such as housing, day care, education and family counseling, to the very special which includes

outreach preventive services for families in trouble, family foster care, adoption, and a variety of residential options for youths with severe problems. Finkelstein stresses that these programs must be family-centered, they must be linked to past family connections, and they must build connections into the future. This work will offer students and scholars in social work, child welfare, and public policy a complete overview of the systemic difficulties of the American family as well as compatible and practical programs designed to meet current family needs.

On the basis of a 14-year follow-up study of 268 infants in residential care, the authors evaluate the relative merits of adoption, foster care, return to parents or extended family. They stress the significance of the absentee parent, of social work intervention, the advantages of late adoption and make a case for a new look at residential group care as a viable alternative for dependent children in placement. This is the only study to follow up over 14 years an entire population of infants in residential care. It contains comprehensive data on all placement alternatives to which these children were exposed including adoption. It evaluates the comparative impact of each of these placement paths on the subsequent life of the children and their families.

Institutional care-Great Britain-Evaluation

Over 6,000 children live in residential homes in England and Wales, but it is proving increasingly difficult to provide them with satisfactory care. The fact that some children's homes are better than others is well established, but why should this be so? Past answers have tended to be tautologous - rather on the lines of a good home is one where children do well; children do well because they are in a good home. This Dartington study examines various aspects of children's homes and explores the connections between them in an attempt to break down the old circular argument. Structures are discernible in the relationship between different types of goals - societal, formal and belief; the variable balance between these goals determines staff cultures, which, in turn, shape the child cultures that develop. Such relationships are important because of their close association with outcomes - whether the children do well, whether the homes prosper. The model described in the book provides a

conceptual framework and a set of causal relationships that should help professionals to plan and manage residential care better and so meet the needs of vulnerable children more effectively.

Children-Institutional care-Cross-cultural studies

For centuries, societies have relied upon residential care settings to provide homes for children, and for much of that period a debate has raged over whether such settings are appropriate places for children to be raised. In recent years this debate has taken on an international dimension as human rights policies have called into question the legitimacy of residential care of children. Unfortunately, the ideological fervor that usually accompanies such discussions prevents a more nuanced understanding of the reasons that countries continue to make use of residential care. *Residential Care of Children: Comparative Perspectives* fills major gaps in knowledge about residential care and is intended to inform debates within and between nations about the appropriate use of such institutions. Eleven country-specific chapters, written by child welfare experts from around the world, provide an in-depth understanding of the historical development of residential care, the current state of affairs, and predictions for the future. Chapters describe how residential care is defined in each country, how it has evolved over time, factors that have contributed to the observed pattern of development of residential care, and potential concerns for the future. An integrative chapter presents a critical cross-national perspective, identifying common themes and analyzing underlying factors. Seeking to explain rather than cast judgment, *Residential Care of Children: Comparative Perspectives* will be fruitful reading for policymakers, program administrators, advocates, practitioners, and scholars interested in creating better services for vulnerable children and youth.

The last two decades have seen a rapid decline in the use of residential care for children, but why? This review examines research into residential child-care undertaken since World War II. It reveals the changing role of residential care and examines its effects on children, concluding that the more child-centred and overtly caring the regime, the better the outcome for children, from the point of view of their education, personal growth, development and social conduct.

What happens to children who pass through residential care? How are homes run and what is it like to live and work in them? What is meant by quality in residential care and how does this affect outcomes for children? These are some of the gaps in our knowledge identified in the 1990s after a series of inquiries into the handling of residential care. As part of the government response, the Department of Health initiated a programme of research into aspects of residential care, resulting in a series of books published in association with John Wiley & Sons. *Caring for Children Away From Home* summarises and brings together the findings discussed in these books and demonstrates their relevance to policy and practice. This book, in conjunction with other titles in the series, contains lessons for all those concerned with children and young people living away from home.

Secure accommodation continues to be a controversial facility for children in the care and criminal justice systems. Children are placed in secure accommodation for a wide range of reasons, and include those who have run away from home or care as well as those who have committed serious crimes. Teresa O'Neill argues that the ideological confusion between welfare and justice leads to contradictions in policy and practice. She suggests that the fact that most of the boys - who form the majority of children in secure accommodation - are admitted through the criminal justice system while most of the girls are admitted through the welfare system make this a gendered issue. The author explores the circumstances and experiences of children in secure accommodation through an examination of their own stories and through the accounts of their social workers and the staff working at the secure units.

From these narratives she draws conclusions on the meaning of being in a secure unit, the effectiveness of this type of provision in meeting the needs and improving the life chances of these, and the complexities inherent in the role and practice of secure accommodation. What emerges has significant implications for policy, planning and practice with children in trouble.

Children-Institutional care-Great Britain

Children's homes have cultures which vary from the benign to the malignant. Using a distinctive cross-institutional design, this study of 48 children's homes shows how some were characterised by widespread bullying, delinquency and low morale among both staff and residents whilst others were relatively peaceful and friendly. These differences are explained by the way these homes were resourced, managed and run, thus providing lessons for the future. This accessible text provides: a much-needed insight into the management of children's homes and the impact on their residents; perspectives from a large sample of children, parents, staff and social workers; an examination of the effect on staff and residents of features such as the size of the home, staff ratios, the proportion of trained staff and the approach of the head. Commissioned by the Department of Health, this study is essential reading for practitioners in the social and welfare services and others with an interest in the well-being of deprived, troubled or delinquent young people.

*Working in Children's Homes* is one of an important series of books on residential care based on research sponsored by the Department of Health. This book draws on extensive research conducted over a three-year period. The authors address the challenges and complexities facing those who work with and in children's homes. On the basis of interviews and discussions with heads of homes and staff groups, the authors explore the tasks which face staff groups, the rationale for their procedures, their sources of stresses and rewards, and the everyday ups and downs characteristic of residential care. Key tasks are discussed in depth, such as working with individual children, the mix of young people, managers and others in their own organisation, and the wider networks surrounding the home and the child.

Characteristics of good practice are named, and factors which facilitate good practice and good outcomes are identified. Valuable recommendations are made for: implementing and modifying procedures to improve working practices; staff selection and training; support required by staff groups; procedures and communication channels in the larger organisation and surrounding networks. *Working in Children's Homes* provides a comprehensive commentary on the nature of care and working practices related to children's homes. It is essential reading for all those concerned with the care of children and young people in residential settings.

A recognized leader in the professional development of the child and youth care field presents - in this single volume - a collection of his work related to group care work with children and youth. Henry Maier shares his observations about human development in the

group care context, the perceptions of children and youth, the environments in which we work with them, the role of the worker, and the preparation of child and youth care workers. Dr. Maier's practical approaches reflect the most recent research and thinking in human development. In what way can group care - non-familial living - assure children a developmental progress similar to that of children growing up within regular family care settings? In his practical new text, Henry Maier-one of the most vibrant, creative, and humane figures in child and youth care work today-answers that question for child care professionals using a developmental perspective in his approach to residential group care. He focuses on the developmental requirements of children and adolescents in relation to the care they receive while they are in no-familial, group living situations and also highlights training for the caregivers in order that they can effectively provide the kind of caring involvement that children and youth require. This book is a practical text for courses in the child and youth field, as well as a useful handbook for child and youth caseworkers already on the job.

In this compelling book she draws on the wealth of her personal and professional experience to offer a vivid glimpse into family life with children who have experienced attachment difficulties, loss, abuse and trauma, and shows in a range of everyday situations how the family responded to the powerful feelings and difficult behaviours the children displayed. Drawing on knowledge and ideas that helped her make sense of this experience, the author includes suggestions for carers and professionals on what may be observed in children with unmet attachment needs and post-traumatic stress disorders, and what can be done to promote recovery and develop resilience.

Child abuse

The definitive guide to child abuse - updated and revised. The global problem of child abuse continues to confound those in the field of child protection. Along with information that has made the first two editions of *Child Abuse: Towards a Knowledge Base* bestsellers, this volume includes the most up-to-date research available from the United States, Britain, and the European Union to aid professionals in the struggle to protect children from abuse. Stressing the need to view the problem in historical, social, and political contexts, it provides key practice guidelines and initiatives to keep you on the cutting edge in the field. You'll find a full account of developments in the field since the early 1990s, including: emerging concerns about the extent and nature of institutional abuse; trends toward more preventive approaches to child protection; new research on the consequences of child abuse; recent findings concerning the Internet; and important changes in legislation worldwide

*Don't Tell* examines the effects of sexual abuse on the emotional and sexual life of men, including their sense of self and their personal relationships. Using the first-hand accounts of victims, Dorais shows that certain reactions are specific to male victims of abuse as they attempt to preserve a sense of physical integrity and masculinity. He also provides innovative strategies for both prevention and treatment that will be of use to those who have suffered abuse as well as to their families and all those who are trying to help them - spouses, friends, social workers, and therapists.

Anne suffered years of sexual, physical and emotional abuse by her mother who tried to suffocate her many times. Pat spent his childhood in an industrial school where he was raped by a brother. Geraldine's parents never responded to her screams for help when she tried to beat her brother away from her bed. As the extent of childhood sexual abuse unfolds, we have been forced to look at the dark underside of our society. We recoil from each revelation with shock and disgust and then turn away and forget. But what happens to the victims? How do they survive? This book is a collection of the survivors own stories. Some are doing well, others less so. All have spoken to Iseult O'Doherty with openness and honesty about the horrors they have come through and the long, slow struggle to heal themselves and find peace.

The first part of the project resulted in a book entitled *Missing and sexually exploited children in the EU*. The book stresses the importance of EU-wide multidisciplinary and integrated efforts (between competent authorities and civil society organisations) in collecting epidemiological data as a basis for improved, knowledge-based policy-making in the area of missing and sexually exploited minors. It comprises country reports of all 15 EU Member States. Each country report provides essential definitional information regarding the various forms of sexual exploitation of children and types of missing children, outlines the way data collection on sexual exploited and missing children by various governmental (police, judicial, other) and non-governmental actors is organised, and deliver available data on the phenomena concerned. A final, comparative report bridges the country report information into a first Union-wide epidemiological state of the art, thus showing that current data collection is organised in a very chaotic and poor fashion. At the same time, the report identifies the main weaknesses and shortcomings of applied data collection methods. It also offers a set of recommendations for both Member State and EU action in striving for improved and integrated ways of collecting, administering and centralising reliable, comparable and comprehensive data on the various forms of missing and sexually exploited children.

Towards a world free from violence : global survey on violence against children / United Nations. Office of the Special Representative of the Secretary-General on Violence Against Children - [S.I.] : United Nations, 2016 - 160p. - 9789211013344.

This Global Survey conducted by the Special Representative of the Secretary-General on Violence against Children confirms that recommendations made in the 2006 UN Study on Violence against Children (VAC) are as urgent as they were at the time of the study's release and continue to serve as a fundamental reference for child protection initiatives the world over. It highlights some progress, including awareness raising laws and policies to prevent and address VAC. However, progress has been slow, uneven and too fragmented to bring violence to an end. Most children exposed to violence live in isolation, loneliness, and fear and do not know where to turn for help, especially when the perpetrator is someone close and on whom they depend for their protection and well-being. Governments must increase efforts to practice these recommendations identified in the 2006 UN Study to make them a reality for every child in every country. This comprehensive survey provides important examples of initiatives that successfully shield children from violence and address the attitudes that allow it to flourish. It is being issued as Member States deepen their efforts to define a post-2015 development agenda and ensure an appropriate institutional response.

Safeguarding the rights of girls in the criminal justice system : preventing violence, stigmatization and deprivation of liberty / United Nations. Office of the Special Representative of the Secretary-General on Violence Against Children - New York : United Nations, Office of the Special Representative of the Secretary-General on Violence Against Children, 2015 - 29p. - 9789211013245.

Gender-based violence is a pervasive and devastating manifestation of discrimination against women and girls. International human rights standards provide a solid framework for preventing and responding to violence against girls in both public and private spheres. Unfortunately, non-compliance with human rights obligations to protect girls remains a serious challenge. This report contributes to the dissemination and implementation of the Model Strategies on Violence against Children, adopted by the General Assembly in 2014. It also aims to support the implementation of the Post-2015 Development Agenda, which calls for an end to all forms of violence against children, equal access to justice for all, and effective, accountable and inclusive institutions.

The horrors of rape and sexual abuse reverberate long after the actual abuse occurs. Irrespective of the age and gender of the victim, the emotional and psychological trauma can, if untreated, last a lifetime. Written by a psychotherapist - herself a survivor of sexual abuse - who has been training mental health professionals in this difficult area for many years, this valuable guide offers clear, practical advice and healing strategies for victims of rape and sexual abuse, their families, and the professionals working with them. Following an explanation of the manifestations and effects of sexual abuse and rape, powerful and easy-to-follow strategies and practical exercises for healing are detailed. Important topics covered include dealing with memories, survival responses, understanding behaviors, finding the right therapist, and issues affecting the partners of victims. Common questions and fears of victims are answered, and essential information on support groups and helpful organizations is provided.

Group psychotherapy

Edelson and Berg use stories to present, reflect on and learn from experience. They contrast the stories we tell about individuals and interpersonal interactions and those we tell about groups and organizations, and when we most usefully tell which kind of story. The authors deplore the tendency to rely on individual psychology for understanding problems in groups or organizations and so, emphasizing the psychopathology of individuals, to blame them for what is going on. Their stories are about conflicts between individual and group, and how these affect the formation of a group and what it's like to be a group member. They are also about using and abusing authority; scapegoating; and perceiving, pigeonholing, and responding to members in terms of stereotypes of the other groups to which they belong (gender, race, ethnicity, and status). Finally, the book suggests the various ways different kinds of groups can be used to help people in distress. It also presents what goes into bringing about organizational changes to help people who are trying to do their jobs in less than optimal conditions.

Psychologically abused children-Mental health  
Child psychotherapy

Emotional abuse and neglect are at the core of all types of child maltreatment, and have the most harmful effects on the physical and psychological development and well-being of children. Yet they are considered to be the most difficult to deal with by those who have the responsibility to protect and intervene in effective ways. In this book the author explores the concept of a damaged child, and asks what are the different types of injury, ranging from active to passive, physical to emotional, that stop children from reaching their full potential? psychologically and physically? The author questions whether emotional "damage" to a child can be repaired and answers questions such as: Is some injury irreversible? What

therapeutic techniques are available to deal with emotional abuse? Can the abusers as well as the abused be helped to change? Case studies are provided to illustrate the features of emotional abuse, and chapters are devoted to the assessment and prediction of emotional abuse, effects of emotional abuse as the child grows up, intervention and treatment and working with the family as a whole.

This is one of the books in the Wiley/Department of Health series on residential care. Residential care is an increasingly important topic in social welfare. The series, based on research for the DOH, represents the most up-to-date and authoritative research in this area. This book examines the management of sexually abused and abusing children in foster and residential care. The authors gathered data from a review of 250 carefiles to compare the needs and vulnerability of sexually abused and abusing children with those of non-abused children in care. Drawing on information from their detailed follow-up study of 40 children, the authors explore the management of sexually abused and abusing children inside and outside their placements. They examine the risks these children pose to other residents and foster carers' own children, and the children's vulnerability to further abuse and exploitation. The authors highlight three different groups of children who have distinctive needs for management and placement: prostitutes; sexualised adolescent girls; and young abusers. The book provides a rich source of essential messages for policy and practice aimed at minimising the risks to these children and others.

With humor and compassion, Durrant shows how this competence framework can make everyone - from kids and parents to therapists and staff - a winner. Proposing a framework for residential treatment based on the principle of solution-focused therapy, this book sees the process as a co-operative one involving clients, parents and staff, with the aim of helping children and adolescents, and their families, develop new views of themselves as competent. A central rites of passage metaphor suggests that placement is a period of transition, when children can experiment with new ways of behavior.

I like the interactive style in which the book is written, whereby the reader is invited to consider how they might deal with a situation, following which the authors explain how they approach it. The book is for counsellors in training and a resource for practising counsellors. The methods described can be adapted to different settings, for example school and home. I would recommend this comprehensive and stimulating book to anyone who is interested or involved in working in a therapeutic way with children

Child psychotherapy

Whilst there is a wealth of literature on working with children and adolescents, very little focuses on those who are in residential or foster care. *Psychotherapy with Young People in Care* is a practical guide to working with this group from a psychoanalytic therapeutic perspective. Drawing on the author's years of experience and illustrated with a wealth of clinical examples, as well as a comprehensive glossary, the book tackles those issues most relevant to those working with children and adolescents: the place of psychotherapy in residential/foster care; ethical considerations - confidentiality and sexual abuse; particular problems faced by young people – ADHD, trauma, PTSD. This refreshing and valuable book is an essential teaching text for all those who work with young people in the care system, including child and adolescent psychotherapists, psychiatrists, clinical psychologists and social workers.

Ecopsychiatry

Most mental health professionals today have emerged from training systems with individualistic and compartmentalized orientations. The ecological perspective, however, is a contextual approach which works at the interface between families and the broader ecology or ecosystem of the child; the approach is not new but has not been widely adopted due to the lack of illustrative material available for practitioners. Through an approach more descriptive and explanatory than empirical, the author shows the clinician (or other child care professional) why the child's environment is crucial and provides techniques to draw people in the child's environment into the healing process.

Touch-Juvenile literature

The rules of physical contact can be tricky to grasp and children with special needs are at a heightened risk of abuse. This friendly picture book explains in simple terms how to tell the difference between acceptable and inappropriate touch, thereby helping the child with special needs stay safe. Each story covers a different type of touch from accidental to friendly to hurtful and will help children understand how boundaries change depending on the context. It explores when and where it is okay to touch other people, when and where other people can touch you, why self touching sometimes needs to be private, and what to do if touch feels inappropriate. This book is an invaluable teaching resource and discussion starter for parents, teachers and carers working with children with special needs.

Psychology in literature

Surveying Hawthorne's entire career, from his earliest surviving stories through the romances left unfinished at his death, Frederick Crews defines the terms of Hawthorne's self-debate as revealed in his fiction. Hawthorne emerges from this study as a writer of acute psychological awareness. In an Afterword written for this edition, Crews interrogates his own argument with characteristic unsparingness. He candidly reassesses the theoretical commitments behind his book, reflects on the path taken by Hawthorne criticism since 1966, and answers the question that many readers have asked of this ex-Freudian: "How much, today, remains valid in *The Sins of the Fathers*?" This essay is itself a significant contribution to the current debate over the role of 'theory' in literary studies.
